**EXTENSIÓN AUSTRAL A LA DISTRIBUCIÓN CONOCIDA DE *MICOUREUS*  
*CONSTANTIAE* (DIDELPHIMORPHIA, DIDELPHIDAE)**

**Abstract.** The distribution of *Micoureus constantiae* is extended about 350 km south of the southernmost previously known record. Two new localities are added to the distribution of the species in Salta and Tucumán provinces, Argentina. It is registered for the first time in Tucumán Province.

***Nota Científica***

**REGISTRO DE *RHOPALOSOMA SIMILE* BRUES (HYMENOPTERA:  
RHOPALOSOMATIDAE) PARA EL ESTADO DE TAMAULIPAS, MÉXICO**

**Abstract:** The presence of *Rhopalosoma simile* Brues (Hymenoptera: Rhopalosomatidae) in the State of Tamaulipas, México, is recorded.

***Nota Científica***

**NOTES ON THE NEST HABITS AND HOST RANGE OF CLEPTOBIOTIC  
*LESTRIMELITTA NIITKIB* (AYALA 1999) (HYMENOPTERA: MELIPONINI)  
FROM THE YUCATAN PENINSULA, MEXICO**

**Abstract.** *Lestrimelitta niitkib* is the only cleptobiotic stingless bee species reported for the Yucatán Peninsula. Very little is known about its biology and host range although it is recognised that its role may be crucial in the ecology of stingless bee populations. In this note we present preliminary information on the nest characteristics of this species, its host range and behaviour during nest raids.
